

Industrial Internship Report on
Project Name:- Multi-client Website Offering Client Services

Prepared by
[Kudumula Navitha]

<i>Executive Summary</i>
This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with Industrial Partner UniConverge Technologies Pvt Ltd (UCT). This internship was focused on a project/problem statement provided by UCT. We had to finish the project including the report in 6 weeks' time. My project was Multi-client Website Offering Client Services. This is a web based platform developed using HTML, CSS, and JavaScript that connects users with multiple service providers through a single website, The platform offers services such as web Design, Home cleaning, Electrician, Beautician, and Pet Care. Users can browse available services, view details, and contact the service provider through a simple and user friendly interface. The project demonstrates responsive web design, easy navigation, and practical real world usability. This internship gave me a very good opportunity to get exposure to Industrial problems and design/implement solution for that. It was an overall great experience to have this internship.

TABLE OF CONTENTS

1. Preface	3
2. Introduction	4
2.1 About UniConverge Technologies Pvt. Ltd.	4
2.2 About Upskill Campus	9
2.3 Objectives of Internship Program	11
2.4 Reference	11
2.5 Glossary	12
3. Problem Statement	13
4. Existing and Proposed Solution	14
5. Proposed Design / Model	15
5.1 High Level Diagram	15
5.2 Low Level Diagram	15
5.3 Interfaces	15
6. Performance Test	16
6.1 Test Plan / Test Cases	16
6.2 Test Procedure	16
6.3 Performance Outcome	17
7. My Learnings	18
8. Future Work Scope	19

1 Preface

Summary of the whole 6 weeks' work.

About need of relevant Internship in career development.

Brief about Your project/problem statement.

Opportunity given by USC/UCT.

How Program was planned

Your Learnings and overall experience.

Thank to all (with names), who have helped you directly or indirectly.

Your message to your juniors and peers.

2 Introduction

2.1 About UniConverge Technologies Pvt Ltd

A company established in 2013 and working in Digital Transformation domain and providing Industrial solutions with prime focus on sustainability and RoI.

For developing its products and solutions it is leveraging various **Cutting Edge Technologies** e.g. **Internet of Things (IoT), Cyber Security, Cloud computing (AWS, Azure), Machine Learning, Communication Technologies (4G/5G/LoRaWAN), Java Full Stack, Python, Front end** etc.

i. UCT IoT Platform (**Insight**)

UCT Insight is an IOT platform designed for quick deployment of IOT applications on the same time providing valuable “insight” for your process/business. It has been built in Java for backend and ReactJS for Front end. It has support for MySQL and various NoSql Databases.

- It enables device connectivity via industry standard IoT protocols - MQTT, CoAP, HTTP, Modbus TCP, OPC UA
- It supports both cloud and on-premises deployments.

It has features to

- Build Your own dashboard
- Analytics and Reporting
- Alert and Notification
- Integration with third party application(Power BI, SAP, ERP)
- Rule Engine

FACTORY WATCH

ii. Smart Factory Platform ()

Factory watch is a platform for smart factory needs.

It provides Users/ Factory

- with a scalable solution for their Production and asset monitoring
- OEE and predictive maintenance solution scaling up to digital twin for your assets.
- to unleash the true potential of the data that their machines are generating and helps to identify the KPIs and also improve them.
- A modular architecture that allows users to choose the service that they want to start and then can scale to more complex solutions as per their demands.

Its unique SaaS model helps users to save time, cost and money.

iii. LoRaWAN based Solution

UCT is one of the early adopters of LoRAWAN teschnology and providing solution in Agritech, Smart cities, Industrial Monitoring, Smart Street Light, Smart Water/ Gas/ Electricity metering solutions etc.

iv. Predictive Maintenance

UCT is providing Industrial Machine health monitoring and Predictive maintenance solution leveraging Embedded system, Industrial IoT and Machine Learning Technologies by finding Remaining useful life time of various Machines used in production process.

2.2 About upskill Campus (USC)

upskill Campus along with The IoT Academy and in association with Uniconverge technologies has facilitated the smooth execution of the complete internship process.

USC is a career development platform that delivers **personalized executive coaching** in a more affordable, scalable and measurable way.

Seeing need of upskilling in self paced manner along-with additional support services e.g. Internship, projects, interaction with Industry experts, Career growth Services

upSkill Campus aiming to upskill 1 million learners in next 5 year

2.3 The IoT Academy

The IoT academy is EdTech Division of UCT that is running long executive certification programs in collaboration with EICT Academy, IITK, IITR and IITG in multiple domains.

2.4 Objectives of this Internship program

The objective for this internship program was to

- get practical experience of working in the industry.
- to solve real world problems.
- to have improved job prospects.
- to have Improved understanding of our field and its applications.
- to have Personal growth like better communication and problem solving.

3 Problem Statement

Many local service providers, such as electricians, beauticians, home cleaners, pet care providers, and web designers, face challenges in reaching potential customers because they do not have a dedicated online platform to showcase their services. At the same time, customers often spend considerable time searching through different websites or relying on personal recommendations to find reliable service providers. This process is time-consuming and may not always provide the best options.

The absence of a centralized platform that brings together multiple service categories creates inconvenience for both customers and service providers. Customers cannot easily compare different services or contact professionals from one place, while service providers have limited opportunities to promote their businesses and attract new clients. This gap highlights the need for an easy-to-use digital solution that connects both parties efficiently.

To address this problem, the Multi-client Website Offering Client Services project was developed using HTML, CSS, and JavaScript. The website provides a single platform where users can browse various services such as Web Design, Electrician, Beautician, Home Cleaning, and Pet Care. It offers a responsive and user-friendly interface that simplifies service discovery, improves accessibility, and helps local service providers increase their online presence while delivering a better experience for customers.

4 Existing and Proposed solution

Existing Solutions :

Nowadays, several online platforms provide services such as home cleaning, beauty services, electrical repairs, and web design. However, most of these platforms focus on only one type of service or are limited to specific locations. Users often need to visit multiple websites to find different services, which makes the process time-consuming and inconvenient. In addition, many local service providers have limited online visibility, making it difficult for customers to discover their services.

Proposed Solution :

The proposed solution is a Multi-client Website Offering Client Services developed using HTML, CSS, and JavaScript. This website acts as a centralized platform where different service providers can showcase their services in one place. It includes categories such as Web Design, Home Cleaning, Electrician, Beautician, and Pet Care. Users can browse services, view service details, and contact the respective service provider through a simple and user-friendly interface.

Value Addition :

This project saves users time by offering multiple services in one place. It also helps local service providers increase their online presence. In the future, features like user login, online booking, and customer reviews can be added.

5 Proposed Design/ Model

5.1 High Level Diagram

5.2 Low Level Diagram

6 Performance Test

The website was tested to ensure smooth performance, easy navigation, and responsiveness on different devices. The main constraints considered were page loading speed, responsiveness, browser compatibility, and user experience. These constraints were addressed by using optimized HTML, CSS, and JavaScript code, simple navigation, and a responsive layout.

The website was tested on different browsers such as Google Chrome and Microsoft Edge, as well as on desktop and mobile devices. All pages loaded correctly, navigation links worked properly, and the website adapted well to different screen sizes. The system successfully displayed service categories and allowed users to access service details without any errors.

Although advanced performance metrics such as memory usage and processing speed were not measured, the website performed efficiently for the project requirements. In the future, the performance can be further improved by optimizing images, reducing page load time, adding server-side support, and implementing secure user authentication and database integration.

6.1 Test Plan/ Test Cases

Tested website navigation.

Verified all pages and links.

Checked responsiveness on desktop and mobile.

Tested contact and service pages.

6.2 Test Procedure

The website was tested on different browsers such as Google Chrome and Microsoft Edge. All pages, navigation menus, and service links were verified for proper functionality. The website was also tested on desktop and mobile devices to ensure responsiveness. All features worked correctly without any navigation errors.

6.3 Performance Outcome

The website performed successfully during testing with fast page loading, smooth navigation, and a responsive user interface. All pages loaded correctly without errors, and users were able to browse different service categories with ease. The navigation menu, buttons, and contact section functioned as expected across different browsers and devices. The overall performance of the website was satisfactory, providing a simple, user-friendly, and reliable platform for accessing multiple client services.

7 My learnings

During this internship, I gained practical experience in developing a real-world web application using HTML, CSS, and JavaScript. I learned how to design responsive web pages, organize website content, and create a simple, attractive, and user-friendly interface. This project helped me understand the complete web development process from planning to implementation.

I improved my knowledge of front-end web development by creating multiple pages, adding navigation menus, and organizing different service categories. I also learned how to write clean and reusable code, debug errors, and improve the overall functionality and appearance of the website.

Working on this project enhanced my problem-solving, logical thinking, and time management skills. I learned the importance of project documentation, testing, and ensuring that the website works correctly on different browsers and devices. This experience also improved my confidence in handling real-world development tasks.

Overall, this internship provided valuable industry-oriented experience and strengthened my technical as well as professional skills. It motivated me to continue learning advanced web technologies such as React, Node.js, and databases in the future. The knowledge and practical experience gained through this internship will help me build better software applications and support my career growth as a web developer and software engineer.

8 Future work scope

This project can be further enhanced by adding a user registration and login system, allowing customers and service providers to create and manage their accounts securely. This will improve personalization and make the platform more interactive.

In the future, online booking and appointment scheduling can be integrated so that users can book services directly through the website. A secure payment gateway can also be added to enable online payments for selected services.

Additional features such as customer reviews and ratings, location-based service search, and real-time notifications can improve the user experience. These features will help customers make informed decisions and increase trust in the platform.

The website can also be upgraded by integrating a database and an admin dashboard to manage users, services, and bookings efficiently. These improvements will make the platform more scalable, secure, and suitable for real-world commercial use in the future.
